

Atrial fibrillation

Provisional on-device interpretation

RECORDED

15 Jul 2025 at 18:25

DURATION

30 seconds

QUALITY

94%

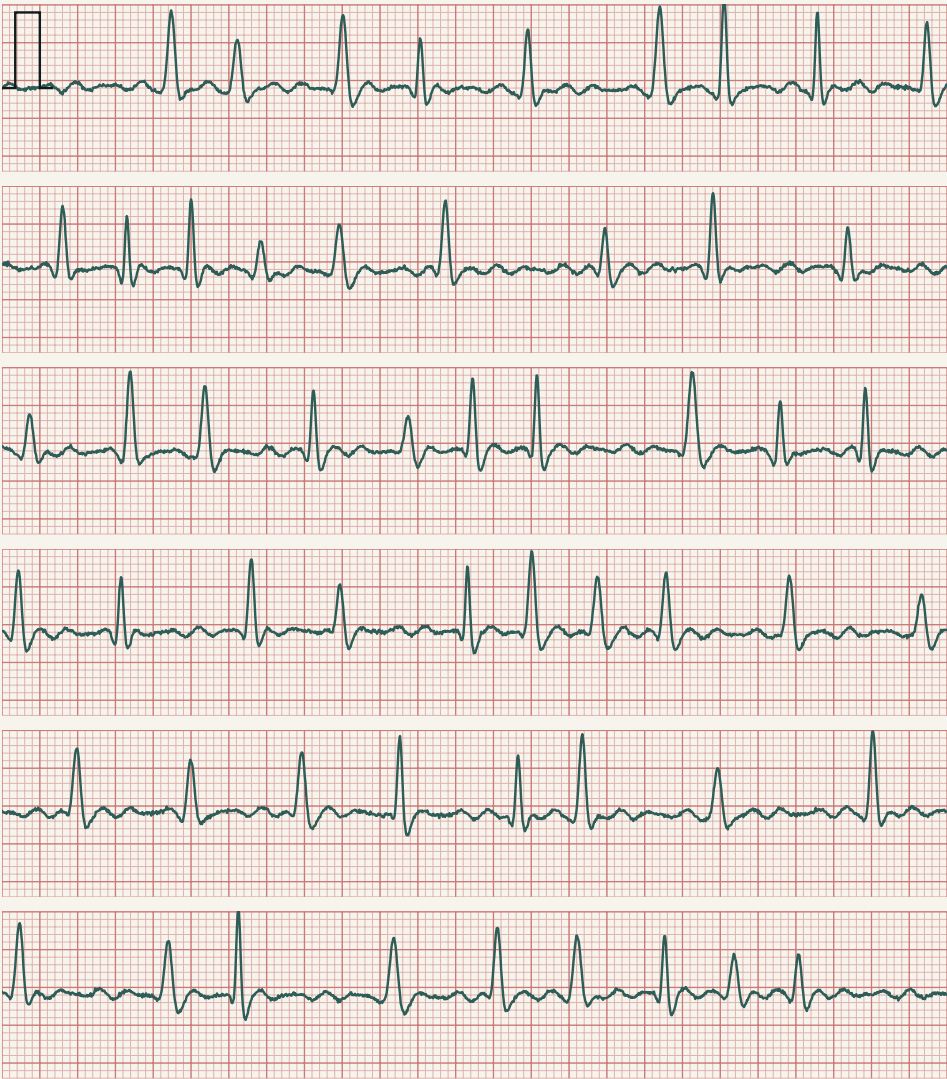

CONFIDENCE

100%

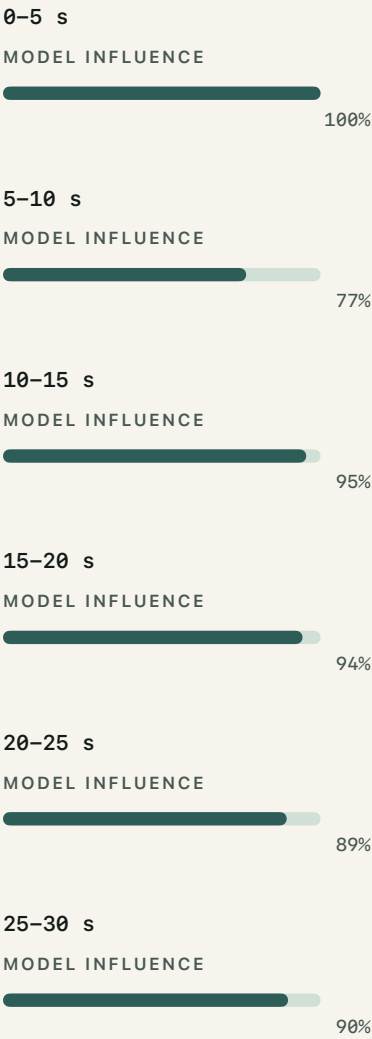

MODEL VIEW

30-SECOND RHYTHM STRIP

25 mm/s / 10 mm/mV / 256 Hz

HOW TO READ

Each row is five seconds at a true 25 mm/s time base. The same vertical gain is used throughout. Model influence shows which masked interval most changed the winning score.

READ WITH CARE

This research-only software result is not a diagnosis. Seek urgent care for chest pain, fainting, severe breathlessness, or other concerning symptoms. A clinician should interpret this single-lead recording in context.
